Lens Framing

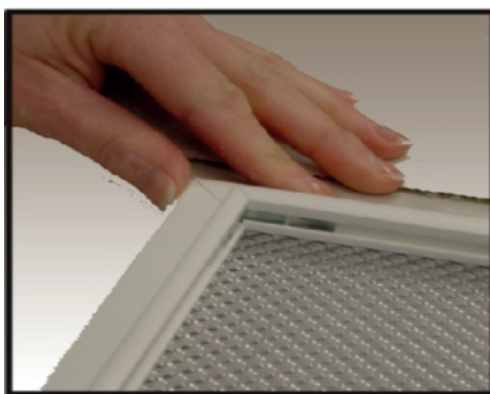

Cutting panels

All lenses are cut on either a band saw or a circular saw for precision. Lenses are supplied “cut as come” with blade quality edges unless otherwise specified. Most premium grade sheets are supplied with a protective backing sheet fixed to the smooth sides. This sheet should be removed prior to Installation.

Framing panels - Easy fix

The majority of our panels 3mm or under can be fitted into our range of unique frames. This substitutes the need of expensive time consuming metal frames. Let us manufacture these complete parts for you. The Easy fix frames are designed to suit many types of luminaire bodies. As they are both solid in colour and extruded from a tough UV resistant TP(a) rated plastic, they are well suited for use in a whole range of applications from hospitals to offices. By simply changing the centre lenses from polystyrene to Polycarbonate , we can offer an impact resistant product.

The Easy fix system has been designed to be truly versatile. The specially designed channels allow us to strengthen the panel in both the length and width for use in areas of high humidity or higher than average temperatures. In addition all Easy fix lense frames are fitted with metal corner clips that provide additional strength and stability during transport and maintenance procedures. There are a number of standard frame sections to choose from. For details of our standard designs, please contact our sales office.

Fabrication for refurbishment

There are many installations where over the years the lighting diffusers have become brittle or degraded due to the UV emitted from the fluorescent lamps. In this case SLP (UK) Limited can offer a fabrication service to produce replacement units similar to the originals.
